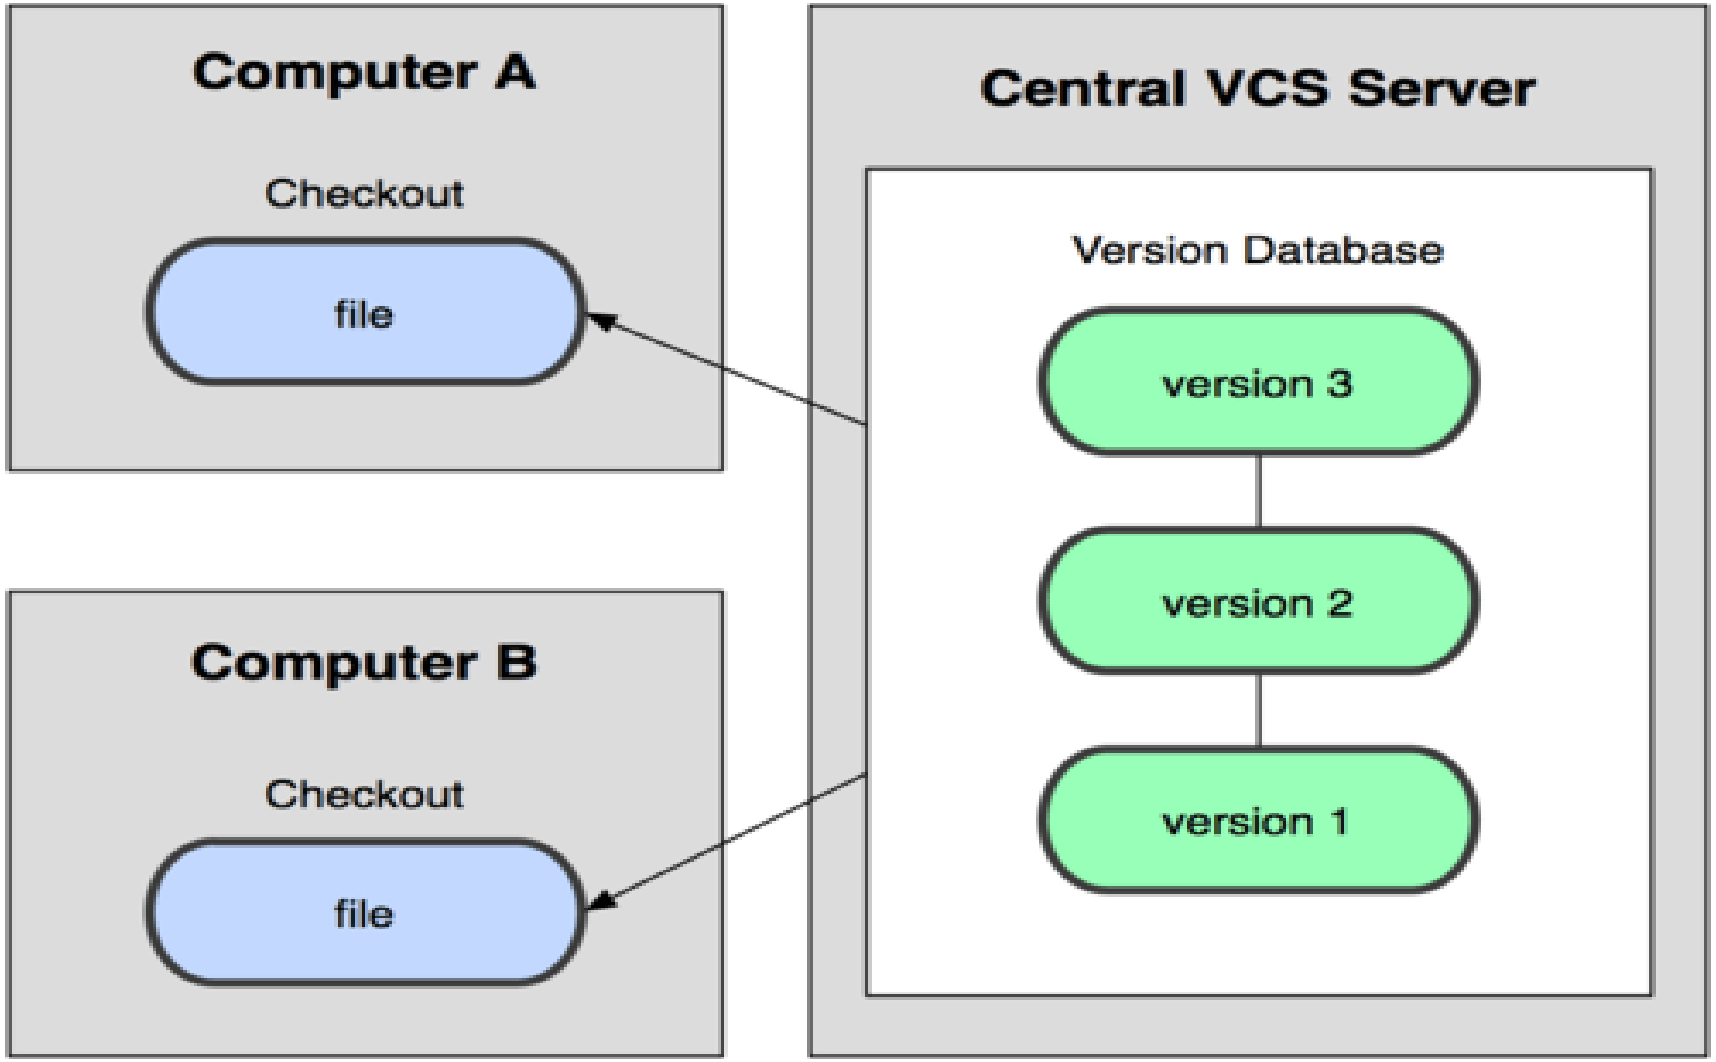
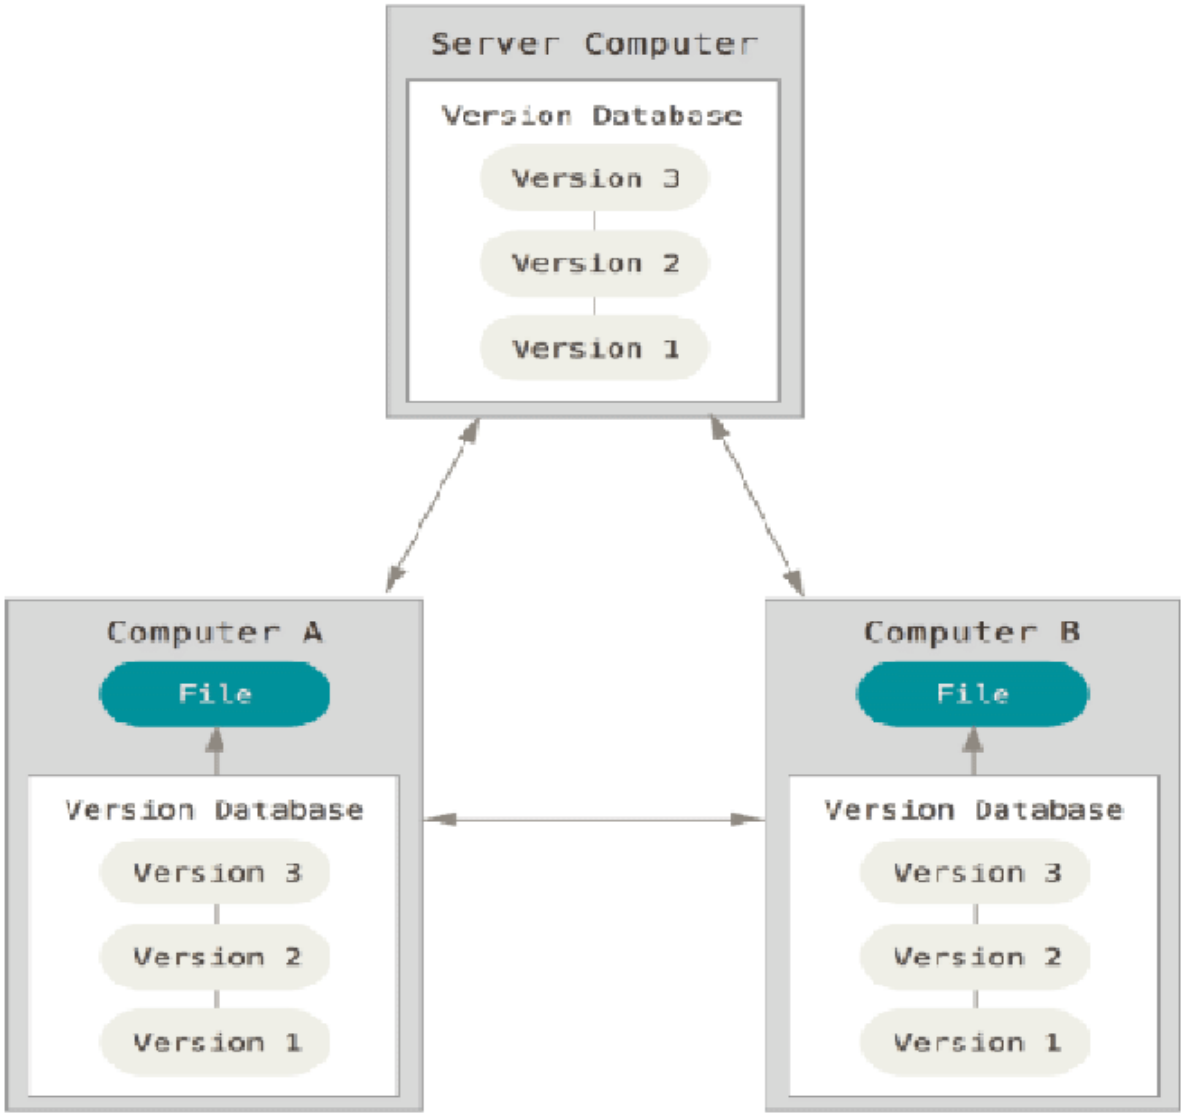
Centralized – *VCS Types*



Distributed– *VCS Types*



Development Tools - *Git*

What is git?

- ✓ Distributed (Decentralized) version control management system
- ✓ Goals?
  - ✓ Speed, simple design, strong support for thousands of parallel branches, fully distributed, scalable

Setup - *Git*

Creating repository

- **git init**

Cloning an existing repository

- **git clone https://github.com/whatevreheree**

Common commands - *Git*

- ✓ **git add README.md**
- ✓ **git rm file.java**
- ✓ **git commit –am “initial commit”**
- ✓ **etc**

Configurations - *Git*

Identity

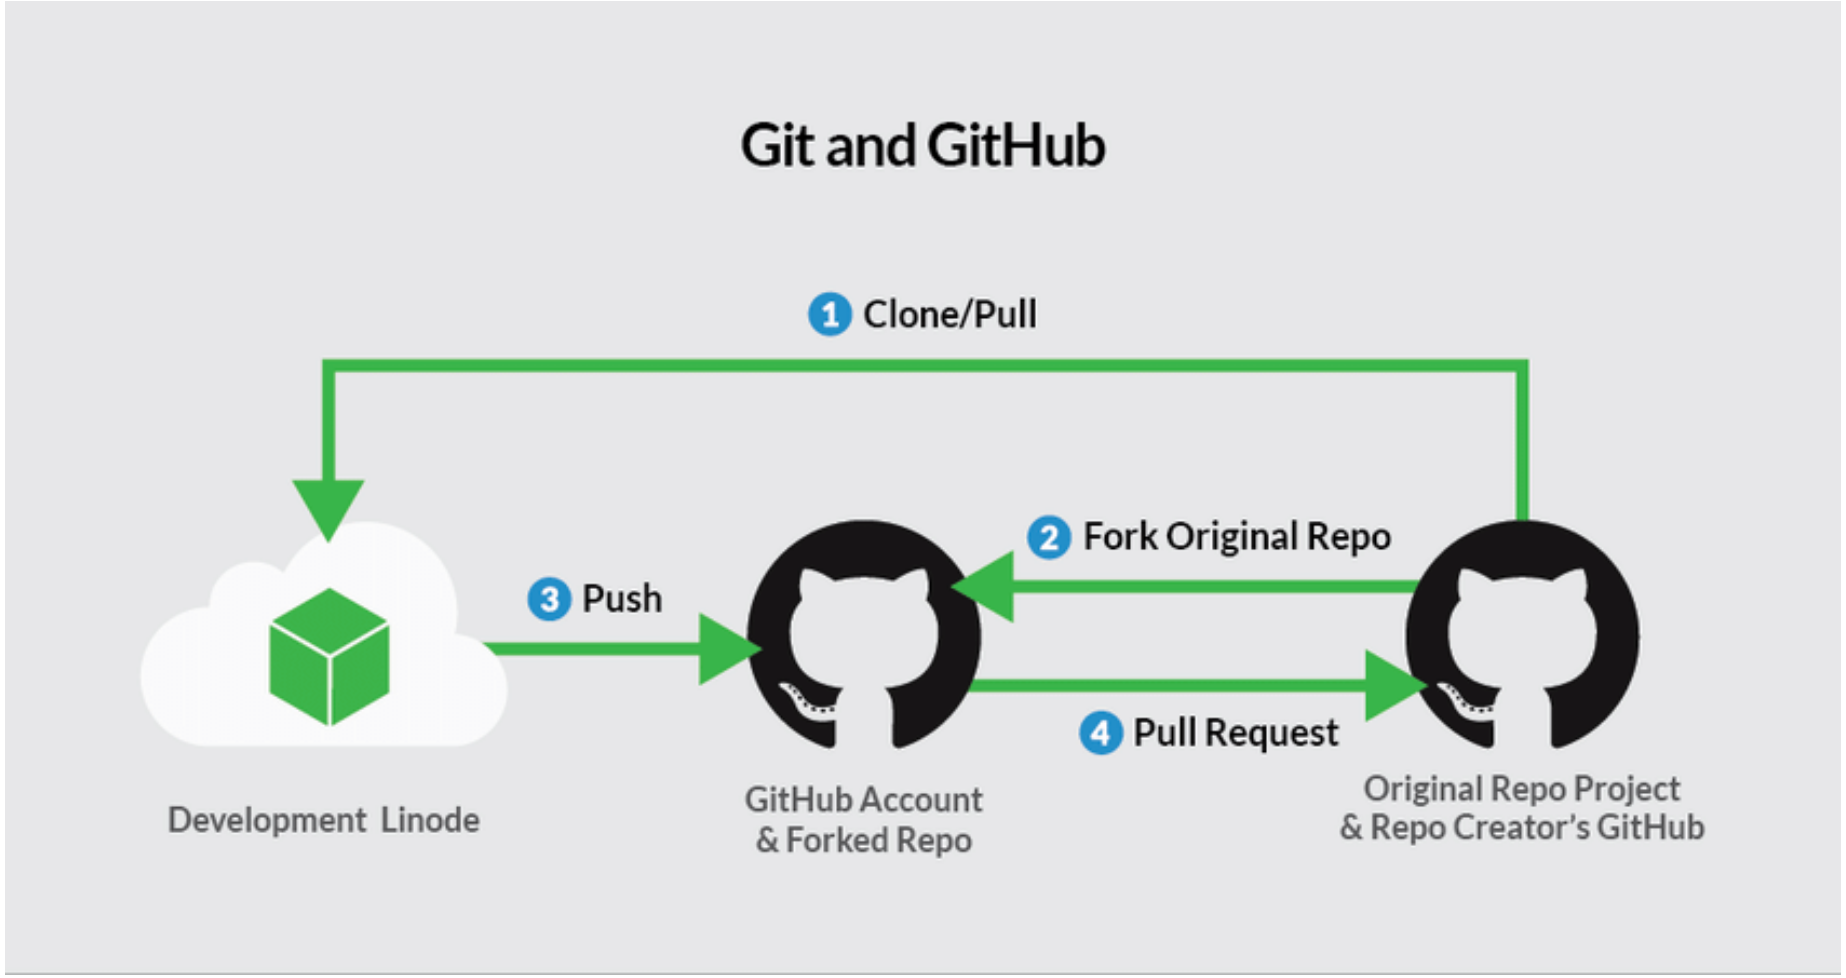
- **git config --global user.name** "John Doe"
- **git config --global user.email** johndoe@gmail.com
- **git config --global user.username** “JohnDoe"
- **git config --global user.password** “johndoe@gmail.com"

Workflow- *Git*

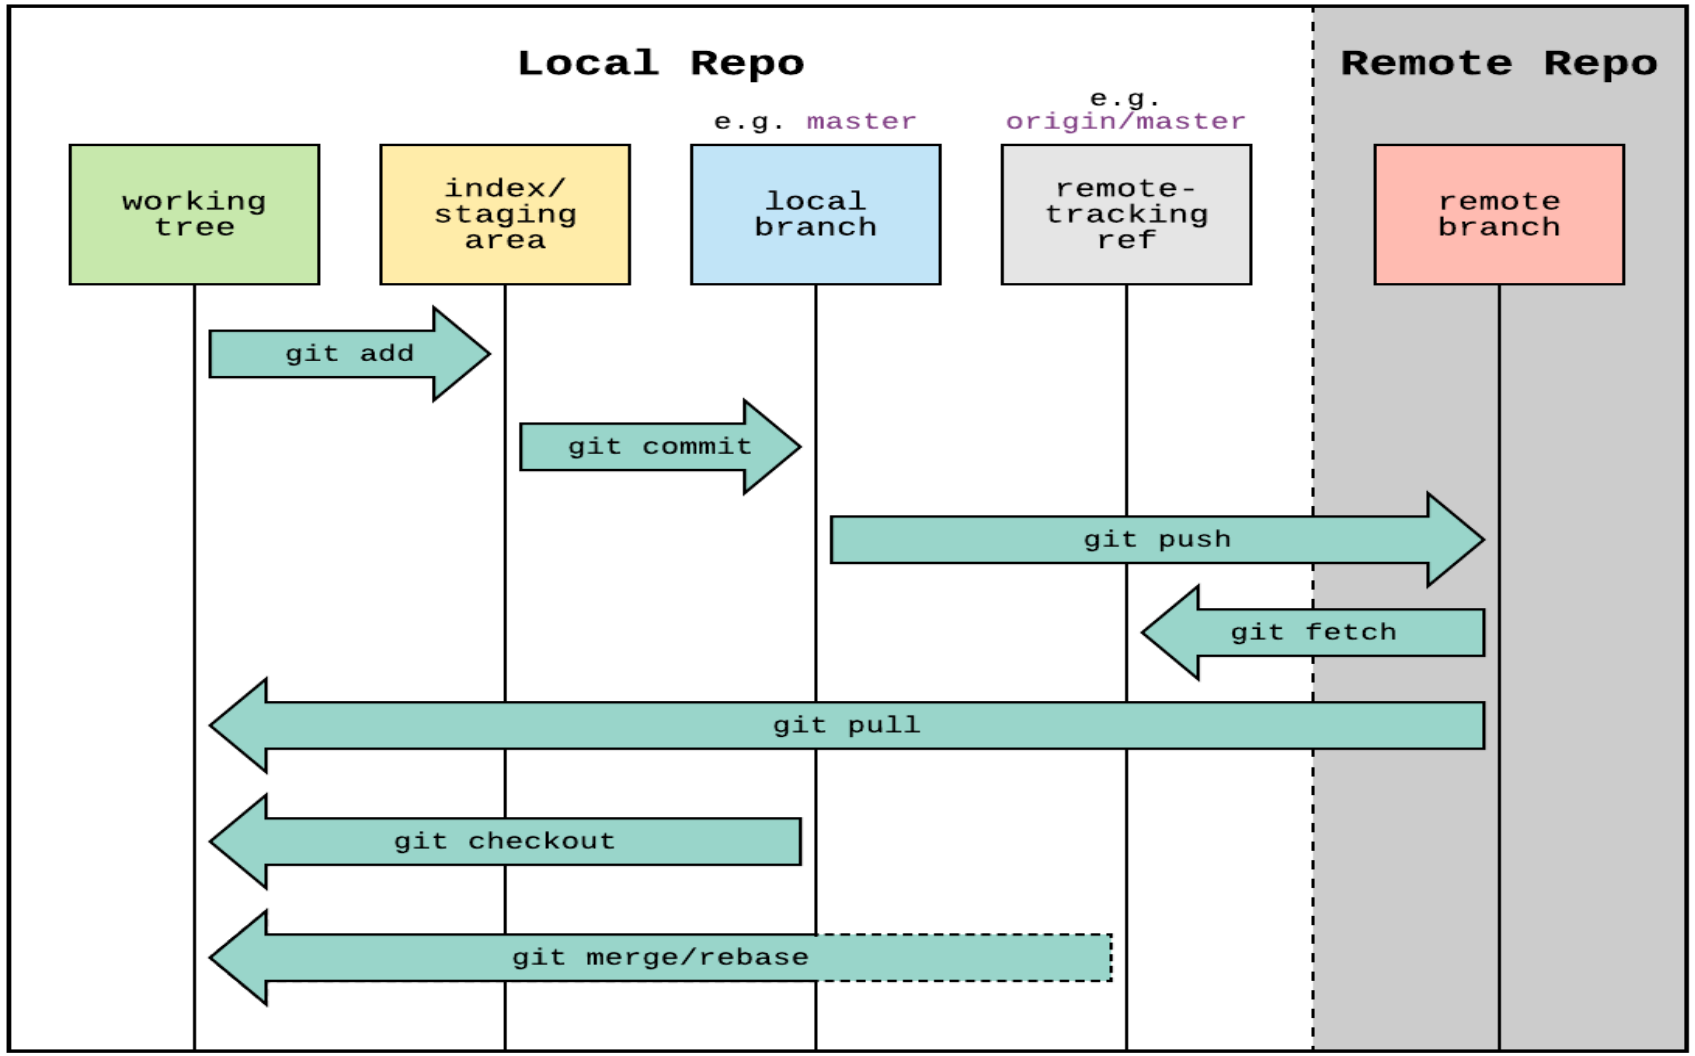
Terms(Local operations)

- ❖Working directory, staging area, repository(git directory)

Workflow- *Git*



Workflow- *Git*



Development Tools - *Git*

- ✓ Creating git repository – Setup repo.
  - ✓ Who am i?
  - ✓ Repository location
- ✓ Working with files in git: add, status, ignore, commit, push, pull, fetch
- ✓ Branching
- ✓ Issues
- ✓ Release
